Android phone 3000 to 5000

You've just lifted your new Android device out of the package, and you're beaming. Maybe your hands are shivering with anticipation. Your mouth is dry and the pupils are enlarged. Okay, maybe you're not so excited, but a new phone is definitely a reason for the celebration. What happens next, though? Here are some of the first things every Android owner should do with their phone when they remove it from the box. These little exercises will ensure that you get the most out of the device from day one. Check your deviceSeed, take a while to really evaluate what you're holding in your hands. You are now the owner of a portable device so staggering futuristic that no science fiction writers saw it coming. Touch its screen in the right places, pizza will arrive at your door. Will a man in Morocco start talking to you. Or it will be a video of cats jumping in cardboard boxes. You are the most powerful God in this pocketable screen. Don't let all this force go to your head. To make sure that the device is long enough to ensure that the device is so insealed. Go through all the phone packages and evaluate everything. Review any warranty information and note any accessories. Most Android phones come with a SIM too, so be sure not to throw that out if you ever want to install a new SIM card. You probably also got a charger and maybe even a nifty set of earbuds. Take data downloads to get this battery charge. Although many phones will be partially charged, they usually don't come fully topped off. You're going to be playing with your new toy for the next couple of hours and you don't want it to die for you right in the middle of a crucial process. You might want to connect to your wireless network, if available. Not all of us have unlimited data, and you almost certainly will download a lot on your first day with your phone. It might not be a good idea to start eating in your monthly limit right away. Log in to Google and let the magic flow When you turn on your device for the first time, the tutorial will guide you through the setup process. It will vary a tiny bit from phone to phone, but one of the first things it will ask you to do is log into your Google Account. If you want, you can skip this step, but we don't recommend it. When logging in, Google connects your device with a ton of other services, and this is the first step to personalize your phone. Activating this account will automatically set up your email, calendar, and contacts list, and it will prepare your phone to sync your identity across devices. This is also required for the Play Store. If you already own an Android device in the past, you are going to witness some magic. After you sign up for a Google Account, your phone will connect to the Google Play Store and try to download all the old apps. Before your own eyes, this stock device will turn faster, version of your old phone. Disable bloatware your phone probably came with some apps pre-installed by the manufacturer or carrier that you do not ask for and can not get rid of (unless you decide to root). These apps take up space and can slow your phone's jumping. To maximize your phone's capabilities, you might want to send this content. When your phone is on and running, open the Apps settings menu and find any apps that were preloaded on your phone. You may not be able to uninstall them, but you can disable them and uninstall any updates that will keep them occupied to a minimum. Disabling the app also means you won't see it in the app drawer anymore. However, the word caution. If this is your first Android device, you might want to keep your previously installed apps until you're sure you don't need them, they won't leave the main part of your phone experience, or until suitable alternatives are found in the Play Store. When you set up your device in its initial setup, it can also ask you to sign up for additional malware protection or other additional services. Feel free to skip these offers; You really don't need to go to more than a google account during setup. Set up your space and get some new apps tooOnly because your phone is installing all your old apps doesn't mean you have to keep doing things the same. Getting a new device is a great way to start some bad habits and start making better life decisions or at least some better app decisions. Visit the Play Store and check out some of the apps you've used. You can also try another launcher, download some new games, or choose a new music player. If you're not a big keyboard fan installed on your device, pick up a new one like Swiftkey, Chroma, or Minuum. They pay attention to your typing habits and make texting a breeze. It is also important to remember you still need to sign up for Facebook, WhatsApp, Netflix, and whatever other services you have. Once you're all apps installed, you can start adjusting your device to your liking. You can set up new wallpapers and ringtones, and customize the Start screen with app shortcuts and widgets. Remember to organize fast switch in the notification panel, adjust screen brightness, and enable gestures, and other useful features your device can offer. Here are some of the best sources to find some of the best apps, games, and services for your new devices:Device security Your phone has a lot of sensitive information, especially if you use it to deliver a bank or purchase or pizza. It is important to establish some robust security measures to protect your privacy and identity. Pin and model lock are two security features available on most Android phones. Many of them also have a fingerprint scanner or even a face Elements. Just remember, no biometric method is as secure as a password. You can also verify that the device Smart Lock options. Smart Lock is a pretty cool feature that allows the phone to bypass the lock screen in certain situations. For example, you can set your phone to remain unlocked if it's near a specific Bluetooth device, such as a car stereo. It can also sense whether it has been set up or passed on to a new user since it was last unlocked. Make sure everything is so far! There's a pretty good chance that your device may have some updates waiting for you. Sometimes these will be minor fixes or speed improvements. Sometimes the whole new version of Android is waiting – especially if your new phone has been on the market for a while. You can check for the latest software updates by going to settings > about phone > system updates. In addition to your operating system, you can also update previously installed apps by visiting the Play Store, selecting My Apps and Games from the menu, and tapping the Update All button at the top, if available. Set up mobile data tracking If you don't have an unlimited plan, monitor how much data you've used in a specific billing cycle. Beyond the limit, all cat videos you watch on YouTube can get more expensive. Setting up mobile data tracking is a breeze. Point to your device settings, tap Data usage, and then set the billing cycle and the amount of data the plan offers. The next and final step is to enable data alerts and data restrictions. The first will notify you when you've used a predefined amount of data, and the latter will turn off mobile data when you reach the limit you've set. If you don't find data tracking on your Android device, don't be afraid of my friend. There are many special apps in the Play Store, such as My Data Manager, which you download using the button below. Learn about your deviceExpe time to explore your phone's settings. Sift through menus and submenus, and take mental notes about where the different features live. This can save you a lot of time later and you might even discover some new things about your device. The ancient Greeks (and also Oracle of the Matrix) had the saying: Know yourself. You put a lot of personal information on your phone, and you'll probably use it so much for your interpersonal communication, so your phone is a bit like an extension of yourself. Don't let it be a stranger! Think about setting up a new phone: how you could move to a new location. Do not throw these rooms empty. Move your old familiar furniture and hang some new pictures. Spruce place up. Give it a thorough cleaning. After all, you're going to be living here for some time. Setting up an Android device may seem overwhelming, but it can be nice to settle down and enjoy the process. Read more: 5 Android settings you should change to level up your smartphone gameWhether is the first thing you do when you get a new phone? Let know the comments! Jeffrey CoolidgeGetty CoolidgeGetty Where's your phone now? Go ahead, make sure you have it; we'll wait. Got it? If you don't, breathe easily. There is a simple solution. Google has just announced a feature that allows you to pinpoint exactly where your phone is just typing in the Find My Phone search bar. That's all. Type it, the map will appear, and you know where on Earth your cell is hiding (with some caveats; keep reading). While your device and PC are logged on to the same Google Account, you can narrow your phone's location. If you've enabled location services on your Android device and Bluetooth is turned on, the search result should be where you need to go (roughly) to get your beloved technology back in your hands. Is your phone somewhere in your house? They've got that on also letting you call yourself using a button from a Google search result. Your phone's ringtone will be muted at full volume, even if the sound is muted, the perfect solution when the phone somehow gets under the sofa cushion, in the laundry room or in the dishwasher. (Stranger things have happened.) Although you might find the missing device online before (using Android Device Manager), this new feature makes finding your precious home type easier. And in the old days of last week, if your phone was in the house and your ringtone was off, you were out of luck.
